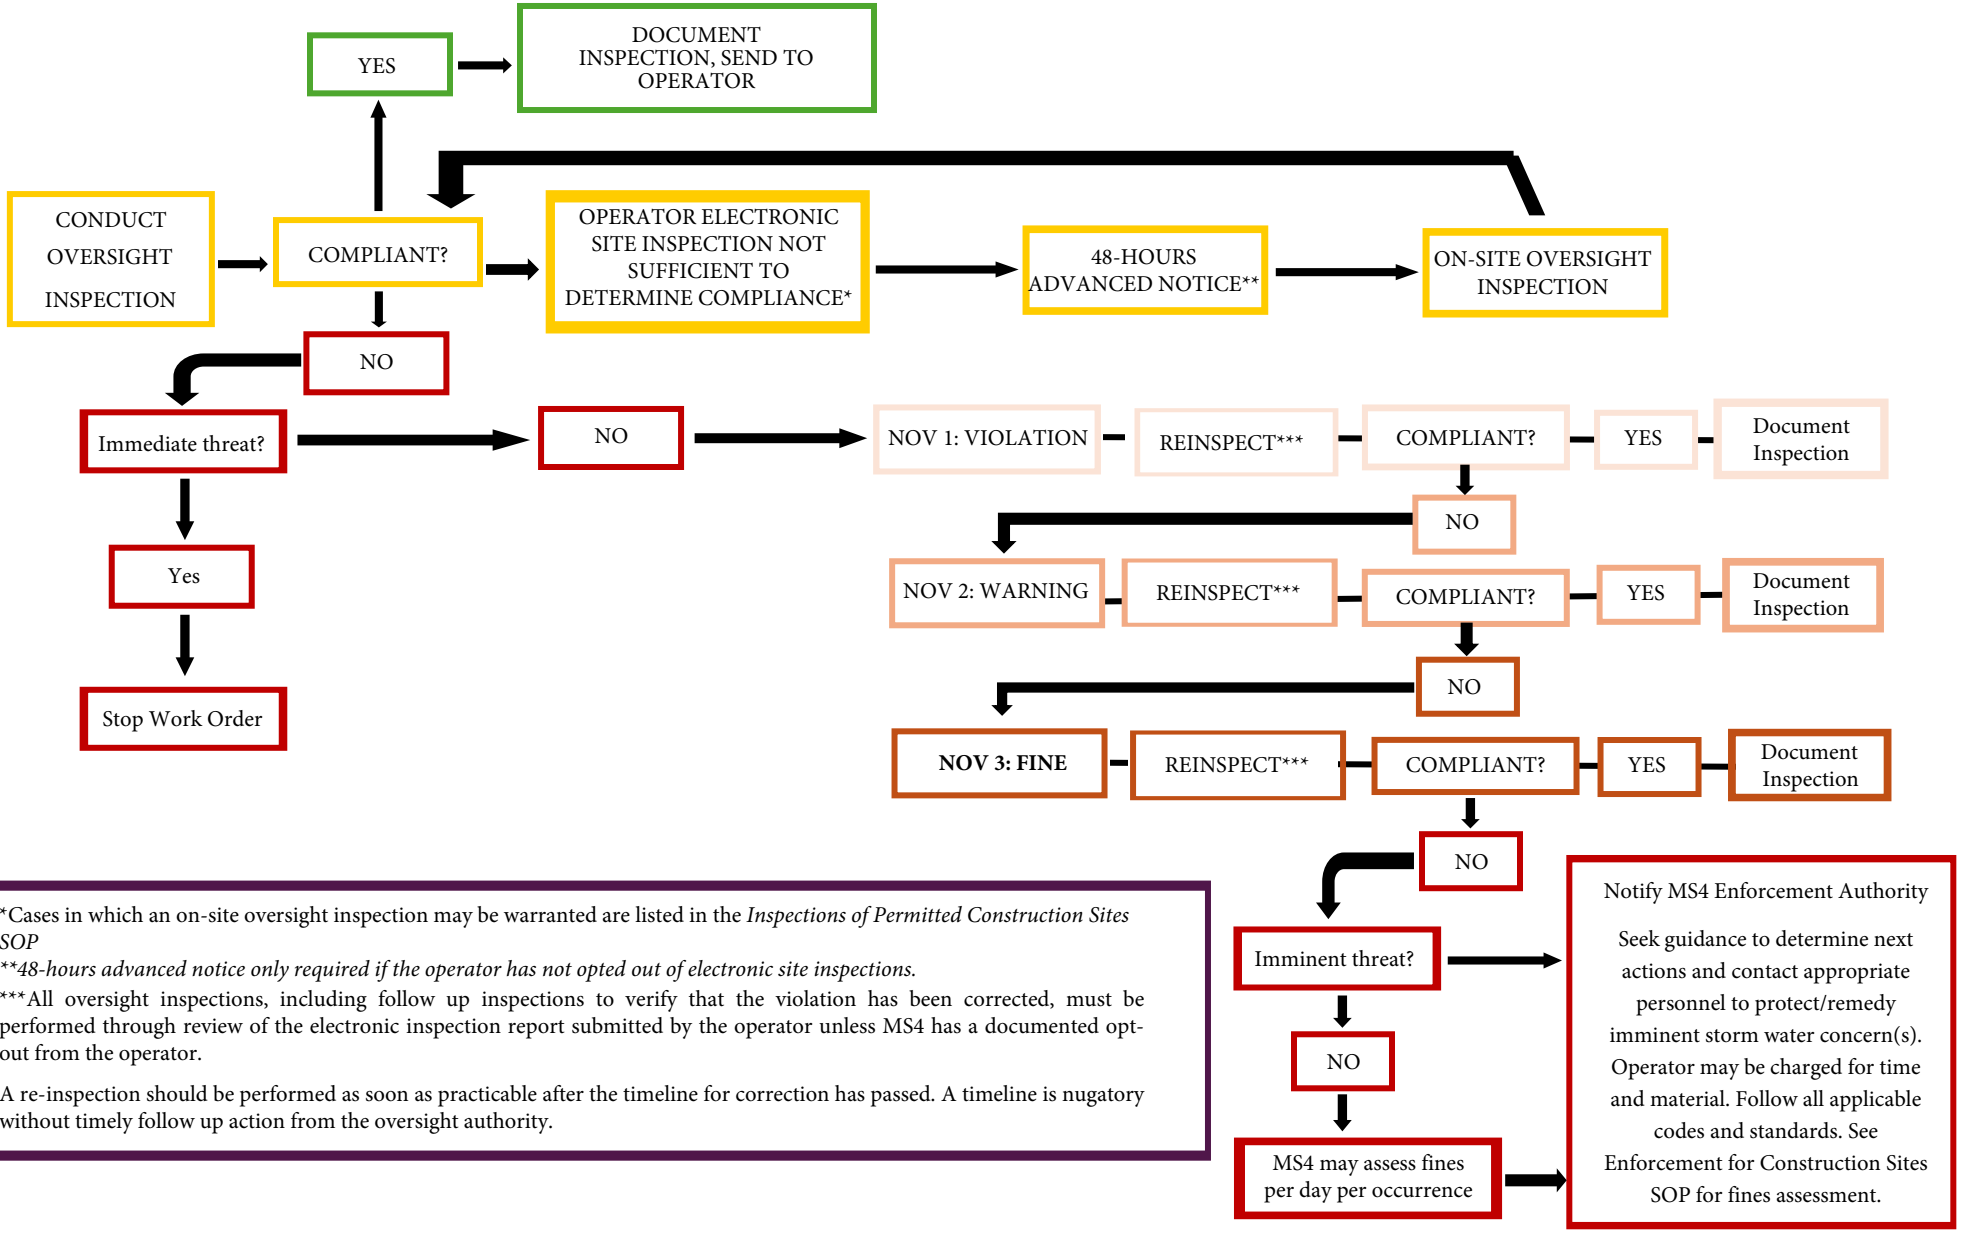
Enforcement for Construction Sites

Flow Chart



*Cases in which an on-site oversight inspection may be warranted are listed in the *Inspections of Permitted Construction Sites SOP*

***48-hours advanced notice only required if the operator has not opted out of electronic site inspections.*

***All oversight inspections, including follow up inspections to verify that the violation has been corrected, must be performed through review of the electronic inspection report submitted by the operator unless MS4 has a documented opt-out from the operator.

A re-inspection should be performed as soon as practicable after the timeline for correction has passed. A timeline is nugatory without timely follow up action from the oversight authority.
